SAS VALE

Website Structure & SEO Content Plan

US-market positioning — location-neutral, service-first, keyword-mapped.

A note on positioning, stated plainly up front: this plan targets the US market and does not mention Pakistan anywhere on the site. It does not, however, claim a false US address, office, or headquarters — the site simply never states a location. This is the safe version of what you asked for: US-facing without a fabricated claim that could backfire if a client checks. Every page below is written on that basis.

Positioning Approach

How the site reads

Remote-first digital agency serving US businesses. Copy uses USD implicitly (no explicit currency symbol needed unless pricing is shown), US spelling conventions ("color," "optimize," "center"), and references to US business hours / EST-PST availability language where natural — without ever stating a country.

What's avoided

No Pakistan mention, no city/country in footer or schema markup, no fabricated US address or phone number. Google Business Profile is not used for this positioning (it requires a real, verifiable address) — SEO here runs entirely through the website itself: on-page content, technical SEO, and off-page link building.

Contact & trust signals

Use a professional email domain (hello@sasvale.com), a contact form, and if you get a US-based virtual phone number (Google Voice or similar) that's a legitimate, honest way to make US contact easier — it's a real working number, not a false location claim.

Technical SEO Foundations

Site speed

Next.js + Vercel already covers most of this — image optimization via next/image, minimal JS bloat, fast TTFB.

Metadata

Unique title tag + meta description per page, written for click-through (not keyword-stuffed), under 60/155 characters respectively.

Schema markup

Use Organization and Service schema (JSON-LD) — omit the "address" property entirely rather than filling it with false data. LocalBusiness schema should NOT be used since there's no real physical location to declare.

URL structure

Flat, descriptive slugs: /services/web-development, /work, /work/[project-slug], /about, /contact — no unnecessary nesting.

Internal linking

Every case study links back to its relevant service page, and every service page links to 1-2 relevant case studies — this is what actually moves rankings for a new domain.

Site Map Overview

Page	URL
Home	/
Services (hub)	/services
— Web Development	/services/web-development
— Custom Software & Management Systems	/services/custom-software
— Branding & Identity	/services/branding
— SEO & Digital Marketing	/services/seo-marketing
— AI Integration & Automation	/services/ai-integration
Work (case studies)	/work
About	/about
Contact	/contact

Individual service pages are the biggest SEO lever here — each targets a distinct keyword cluster instead of one homepage competing for everything at once.

Page-by-Page Content Plan

Home /

Purpose

First impression + navigation hub. Must communicate what you do and for whom within 3 seconds, without relying on location as a trust signal.

Content structure

Hero: direct value proposition (e.g. "Web development and software built for growing businesses") + primary CTA. Trust strip: honest, modest numbers (projects delivered, technologies used). Services grid (5 services, linking to each service page). 3 featured case studies. Dark statement section. Process overview. Final CTA.

Target keywords

web development agency, custom software development company, hire web development team, digital agency for small business

Title tag

SAS Vale — Web Development & Custom Software Agency

Meta description

Custom websites, software, and digital growth for growing businesses. Real engineering, direct founder access, delivered remotely.

Services Hub /services

Purpose

Aggregator page that captures broader "services" search intent and funnels into specific service pages.

Content structure

Short intro paragraph, then a card grid linking to all 5 service pages with a 2-3 sentence summary each.

Target keywords

digital agency services, web development and software services, IT services for business

Title tag

Our Services — SAS Vale

Meta description

Web development, custom software, branding, SEO, and AI integration — everything a growing business needs from one technical team.

Web Development /services/web-development

Purpose

Primary revenue service page — highest search volume keyword cluster.

Content structure

What's included (custom design, responsive build, CMS/no-CMS options, performance-focused). Process specific to web builds. 2 relevant case studies embedded. FAQ section (schema-marked) answering real buyer questions ("how long does a website take," "do you provide ongoing support").

Target keywords

custom website development, business website design, responsive web development, website development for small business, Next.js development company

Title tag

Custom Website Development — SAS Vale

Meta description

Fast, modern, custom-built websites designed to convert — not templates. Built by developers who ship, not agencies who outsource.

Custom Software & Management Systems /services/custom-software

Purpose

Targets higher-value, longer-sales-cycle B2B buyers — schools, retail, operations-heavy businesses.

Content structure

What a "management system" actually solves (real examples: fee & attendance tracking, POS systems, booking systems) without naming clients unless permitted. Emphasis on offline-capable, non-technical-user-friendly builds — a genuine differentiator from generic dev shops.

Target keywords

custom management software, school management system, POS system development, business management software development, custom ERP development

Title tag

Custom Software & Management Systems — SAS Vale

Meta description

Custom-built systems for schools, retail, and service businesses — designed around how your team actually works, not generic software.

Branding & Identity /services/branding

Purpose

Cross-sell page — supports web dev clients who also need brand identity.

Content structure

Logo design, brand guidelines, visual identity systems. Show 2-3 real logo/brand examples if available.

Target keywords

logo design services, brand identity design, small business branding, brand identity package

Title tag

Branding & Identity Design — SAS Vale

Meta description

Logo design and brand identity that looks credible from day one — built alongside your website, not as an afterthought.

SEO & Digital Marketing /services/seo-marketing

Purpose

Recurring-revenue service page — targets retainer-seeking clients.

Content structure

Technical SEO, content SEO, local-independent keyword strategy, social media management as an add-on. Be specific about deliverables (monthly reporting, keyword tracking) since this service is often distrusted due to vague agency promises industry-wide.

Target keywords

SEO services for small business, website SEO optimization, digital marketing agency, technical SEO services

Title tag

SEO & Digital Marketing Services — SAS Vale

Meta description

SEO and digital marketing built on real technical fundamentals — not vague promises. Clear deliverables, clear reporting.

AI Integration & Automation /services/ai-integration

Purpose

Differentiator page — captures rising search interest in AI-for-business queries, positions the team ahead of typical agencies.

Content structure

Practical framing: AI chatbots for lead capture, workflow automation, AI-assisted internal tools. Avoid hype language — lead with concrete use cases and outcomes, not "revolutionary AI" claims.

Target keywords

AI integration for business, AI automation services, custom AI chatbot development, business process automation with AI

Title tag

AI Integration & Automation Services — SAS Vale

Meta description

Practical AI — chatbots, automation, and internal tools that save real time, built by a team that also does the underlying software work.

Work / Case Studies /work

Purpose

Proof hub — the page that actually converts skeptical buyers.

Content structure

Grid of all case studies, filterable by service type if the list grows. Each links to a detail page: Problem → What We Built → Result.

Target keywords

web development case studies, software development portfolio, custom website examples

Title tag

Our Work — SAS Vale Case Studies

Meta description

Real projects, real problems solved — see how we approach web development and custom software for growing businesses.

About /about

Purpose

Trust page — especially important with no location signal, this page has to carry more of the credibility weight.

Content structure

Three founder profiles (real roles, real technical backgrounds). Honest company story — specific, not generic "passionate about innovation" language. Emphasize direct founder involvement on every project as a real differentiator.

Target keywords

about SAS Vale, web development team, software development founders

Title tag

About Us — SAS Vale

Meta description

Three founders, hands-on on every project. No account managers, no outsourced middlemen — just the people who build your product.

Contact /contact

Purpose

Conversion page — keep friction low.

Content structure

Contact form (name, email, company, project type, message) + direct email. Optional US virtual number if set up. No address field displayed.

Target keywords

contact web development agency, hire software developers, request a quote web development

Title tag

Contact Us — SAS Vale

Meta description

Tell us about your project — we typically respond within one business day.

Full Keyword Map (Summary)

Grouped by intent so you can track ranking progress by category, not just by individual term.

Core / Homepage

Keyword	Intent / Notes
web development agency	Broad, high competition — homepage + brand-building target
custom software development company	Broad, targets B2B software buyers
hire web development team	Higher purchase intent — good conversion signal

Service-Specific (Highest Priority)

Keyword	Intent / Notes
custom website development	Web dev service page — strong volume, moderate competition
school management system	Custom software page — lower competition, high relevance to real work
POS system development	Custom software page — matches real delivered project
AI chatbot development for business	AI page — rising search interest, lower current competition
SEO services for small business	SEO page — high competition but high commercial value

Long-Tail (Easier to Rank, Good for Blog/Content)

Keyword	Intent / Notes
how much does a custom website cost	Blog/FAQ content — strong buyer-intent long-tail
website vs template which is better for small business	Blog content — positions you as advisor, not vendor
signs your business needs a management system	Blog content — matches real client pain points you've solved
how to choose a web development agency	Blog content — captures early-research-stage buyers

Recommendation: once the core pages above are live, add a simple /blog with 1 article targeting each long-tail term monthly. This is the most realistic path to ranking for a brand-new domain with no backlink history — long-tail, low-competition content compounds faster than trying to rank the homepage for broad terms immediately.
